

The information below was borrowed from the EDUCAUSE/CAMP webpage which describes the system requirements for systems that will be used in their Shib 2.0 training. While we do not yet have an agenda for our training here at UC Davis, it's likely that similar requirements will be necessary.

- Hampton Sublett

IMPORTANT! Participants will be installing Shibboleth in a virtual machine (VM) environment on their own machines. To accommodate the requirements of the VM, attendees must bring a laptop with the following configuration.

Hardware

- Pentium 4 or later processor
- 1 GB of memory
- 15 GB of free hard drive space
- DVD drive
- 15' Ethernet drop cables to connect to the network

Software

- VMWare Player/Workstation/Fusion software—VMWare Player is a free download for Windows and Linux desktops. VMWare WorkStation and Fusion are commercial products; however, you can obtain a free key by enabling a 30-day trial period. Please test before arriving. NOTE: VMWare Server Products will not work. Please ensure you have one of the versions noted above.
