

ETLG Advance Questions for Unizin

Please add your questions to the list below. After we have collected all of them, we will eliminate any duplication and generate a final list.

1. Beside money, what is expected of member institutions? Is there an expectation that member institutions would convert content to run in Canvas as the delivery system and or what are the other LMS vendors you are in conversation with and/or open source products that you are planning to include?
2. If Unizin is intended to provide an ecosystem predicated on interoperability between the repository system(s) and delivery system(s), can you share your vision for what that means regarding the other types of “content delivery channels” (e.g. LMS/MOOC/Adaptive Learning Environments, etc.)
3. To what extent is Unizin willing to delegate the interoperability layer, and standards conformance for same, to standards already developed, or under development by IMS?
4. What is the current organizational structure? How does work get done within the organization and how to member institutions contribute?
