mi8.ais.ucla.edu is moving!

The middleware infrastructure wiki is moving to a new server. mi8.ais.ucla.edu, the current MI wiki is being retired to test status to make way for a new, beefier wiki server! The new server will have a public hostname of spaces.ais.ucla.edu. Among the changes, the new server now houses its database on the new SQL server cluster. There has also been minor path adjustments in Apache/Tomcat set up to hopefully address a nagging bug we’ve been having with integrating Shibboleth with Confluence.

The new server is under final prep. The move is expected to happen sometime in mid February.
