EDIMI

Enterprise Directory & Identity Management Infrastructure

The Enterprise Directory and Identity Management Infrastructure (EDIMI) Project (also known as the Enterprise Directory Project) is an UTIPP project aimed to improve user identity and access management practices at UCLA.

The initial EDIMI project focused on deploying a campus-wide logon ID (UCLA Logon), standards-based web single sign-on (Shibboleth), and the Enterprise Directory. It began in 2004.

In 2007, CITI approved the next phase of project focusing on deploying enterprise access management tools. At the same time, the project was renamed IAM/UCLA IAMucla.
