

Shibboleth

Shibboleth

Who Should Read: This document is written for technical staff looking to integrate their application with Shibboleth SP 1.3 or above.

Shibboleth is a standards-based, open source middleware software designed to provide web Single Sign-On (SSO) and user attribute exchange within or across organizational boundaries.

Visit the [Internet2 Shibboleth web site](#) for additional information.

Shibboleth at UCLA

An integral part of the IAMUCLA [iamucla](#) program is to move UCLA to a standards-based web single sign-on service. Shibboleth is the right fit. Shibboleth has been adopted by many institutions throughout the world as their web single sign-on service of choice. It has been adopted by the University of California as its federated Single Sign-on solution.

Shibboleth *is* the next version of ISIS.
