

# UCTrust

## UCTrust

UCTrust is the University of California's Identity Management Federation. UCTrust enables authorized campus individuals to use their local campus electronic credential to gain access, as appropriate, to participating services (Resource Providers) throughout the UC system. UCTrust is based on industry standard technologies and a common set of identity attributes and identity management practices.

UCLA is an active member of UCTrust. For additional details regarding UCLA's involvement with UCTrust, contact [Albert Wu](#), Manager of Middleware Infrastructure Group.

The [UCTrust web site](#) contains additional information about the federation.
