

2. Content Options Module (Dan)

Attached is a Word document containing my outline for a module on Content Options (it can be accessed by going to Tools>Attachments on this page - I'm still getting used to Confluence as this is my first exposure to it, so I wasn't sure what the best way to do this would be).

The module consists of 4 major topics with various presentations, discussions, and activities in each. I picture this as being sequenced fairly linearly (at least within each topic, if not the whole module). A flowchart showing each topic within the module is now available on [LucidChart](#).
